

Path / pair	Same complete O1	Execution A: public context	Execution B: public context
Vesta VA1 / VA2	(10 ¹⁸)	status: 0 → 0 current price × current index	status: 0 → 1 cached price × current index
Aurigami AA1 / AA2	(10 ³⁰)	isFromMainFeed = true main selected	isFromMainFeed = false backup selected
Fathom FC0 / FC1	(P, true)	delayed.timestamp = 1789370640 latest.timestamp = 1789372440	delayed.timestamp = 1789372440 latest.timestamp = 1789373340
Fathom FC2 / FC3	(P)	isPriceFresh = true isPriceOk = true	isPriceFresh = false isPriceOk = false

P = 27936237197953895. Integer values use the deployed scaling; they are not cross-path price comparisons.

Vesta provenance follows bound semantics plus cache/status witnesses. These are local contrasts, not one shared state machine.

Fathom evidence is limited to FC0–FC3; the six planned pairs involving its unavailable history/failure arms remain NC.
